

# Power Corp

The Most Liquid Asset backed token in the market

## Our Mission

To provide asset-backed investment opportunities using cryptocurrencies and income producing and value appreciating assets.

To invest in income producing assets such as land, property, equipment, and even commodities.

To build a platform that gives price stability for token investors.

To provide a card system that leverage asset-backed tokens.

## How Powercoin works

### Power Corp

The company will purchase, repurpose, and invest in raw materials, land acreage, solar farms, intellectual property, and token mining rigs as part of its strategy to collect assets which, as managed by the company, will gain value through appreciation.

### Power Vault

### Power Coin

Investors who have stake invested in the token will receive equivalent rewards based on the hash rate purchased. The technology which makes this possible is the Waves Platform, a decentralized blockchain system.

## Why join a mining pool?

Scales to capacity

Cheaper to produce electricity

First to earn block rewards

	Home Miner	Mining Pool
Hashing cost (USD/hr)	0.12	0.05
Reward (BTC per hour)	0.234	0.234
Reward (USD per hour)	1457	1457
Electricity Cost (USD per hour)	1360	569
Profit (USD per hour)	90.06	887
Days to break even	680	100

Mining pools have the advantage of being able to scale with more capacity than individual mining independently. This means that mining pools must have the latest in crypto mining technology. With Powercoin tokens having real asset-backed value and limited supply, it's very likely that mining pools with more powerful resources will earn more coins than individuals mining for themselves. There is also the speed advantage with latest in ASIC mining technology.

## Token distribution

**\$0.50**

Pre-Lease period

**\$2.00**

Mining Lease period

Expected price per P\_Coin token.  
Pre-lease price is equivalent to \$10  
Megahashes per second

P\_Coin now trading on Waves DEX

## Use of proceeds

19 June 2018 to 31 December 2018

Pre-Lease

500 million P\_Coin

Tokens issued

\$5 million in ETH/BTC/WAVES

Hard cap

## Rollout Plan

During the first couple of months of the roll-out, overhead and administrative expenses will not be fully covered by mining revenues. As such, we will reserve 10% of the capital raised from the Pre-ICO token sale. With capital from traditional financing the roll-out phase will include administrative and logistical structuring, which prepares us for breaking ground on our first mining pool facility powered by renewable energy. It is a goal of PowerCorp to stay ahead of the competition and develop new potential ways of mining, increase efficiency and detect pockets of low cost energy worldwide.
